

METHOD FOR ADMINISTRATION OF IGF-I

Abstract of the Disclosure

5 A method is disclosed that comprises administering insulin-
like growth factor-I (IGF-I) to a mammal so as to sustain its
biological activity in the mammal comprising administering a
therapeutically effective amount of IGF-I to the mammal to provide
an exposure to IGF-I for a period of time that stimulates the
10 maximum biological response in the mammal, then discontinuing said
administration for a period of time equal to or less than the time
period used for administration, and repeating this pattern of
administration and discontinuance of administration for a period as
long as necessary to achieve or maintain the desired biological
15 response in the mammal.
